Terrarium

Course Overview

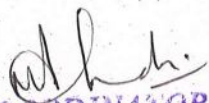

This course will cover theoretical and practical aspects of terrarium design, construction, and maintenance. Students will learn about the different types of terrariums, plant selection, soil composition, and care techniques. The course will also cover aesthetic considerations and ecological principles that ensure a sustainable mini-ecosystem.

Learning Objectives

1. Understand the fundamental principles of terrarium design and its ecological significance.
2. Identify and select appropriate plants and materials for various types of terrariums.
3. Gain practical skills in constructing and maintaining terrariums.
4. Develop an aesthetic sense for designing visually appealing terrariums.
5. Learn troubleshooting techniques for common issues in terrarium care.

Learning Outcomes

1. Demonstrate knowledge of terrarium ecosystems and their environmental benefits.
2. Successfully create and maintain different types of terrariums.
3. Apply plant biology principles in selecting suitable flora for terrariums.
4. Exhibit creativity in designing aesthetically pleasing terrariums.
5. Solve common problems related to plant health and terrarium upkeep.

Syllabus

Module 1: Introduction to Terrariums

- **Theory:**
 - History and evolution of terrariums
 - Types of terrariums: open vs. closed
 - Ecological benefits and applications
- **Practical:**
 - Observing different types of terrariums
 - Introduction to tools and materials

Module 2: Plant Biology and Selection

- **Theory:**
 - Basic plant biology and physiology
 - Criteria for plant selection
 - Common terrarium plants and their requirements
- **Practical:**
 - Hands-on plant selection and identification
 - Field trip to a nursery or botanical garden

Module 3: Soil and Substrate Composition

- **Theory:**
 - Importance of soil and substrate in terrarium health
 - Types of soil and substrates used in terrariums
 - Layering techniques and drainage considerations
- **Practical:**
 - Mixing and preparing soil substrates
 - Creating layered soil bases for different terrariums

Module 4: Terrarium Construction and Design

- **Theory:**
 - Step-by-step guide to constructing a terrarium
 - Design principles: balance, proportion, and aesthetics
 - Tools and accessories for terrarium building
- **Practical:**
 - Building a basic terrarium
 - Applying design principles to create a visually appealing terrarium

Module 5: Terrarium Maintenance and Care - 500001, T.S., India.
New Mallepally, Hyderabad

- **Theory**
 - Watering techniques and moisture control
 - Light and temperature requirements
 - Common pests and diseases and their management
- **Practical**
 - Demonstrating proper watering techniques
 - Monitoring and adjusting light and temperature
 - Identifying and treating common terrarium issues

Module 6: Advanced Terrarium Projects

- **Theory**
 - Themed terrariums (e.g., desert, rainforest)
 - Incorporating hardscape elements (rocks, wood, etc.)
 - Creating biotopes and microhabitats
- **Practical**
 - Designing and building themed terrariums
 - Integrating advanced elements into terrarium projects

Module 7: Presentation and Critique

- **Theory**
 - Presenting terrarium projects
 - Critique and feedback sessions
 - Reflecting on learning and improvements
- **Practical**
 - Presenting completed terrariums to the class
 - Participating in critique sessions and peer feedback

Assessment

- **Theory Assessments**
 - Written tests and quizzes on theoretical knowledge
 - Assignments on plant selection and design principles
- **Practical Assessments**
 - Hands-on projects and terrarium construction
 - Maintenance logs and care journals
 - Final project presentation and peer critique

Recommended Resources

- Books and articles on terrarium design and plant care

ABOUT THE COURSE

- The course deals with the study of the chemical constituents and various compounds present in plants.
- The chemical structures, biosynthesis and degradation of plant products can be studied.
- An understanding of the mechanism of the phytochemical analysis, isolation of phytoconstituents and therapeutic properties of plants can be gained.
- It covers the modern techniques of drug assessment like HPLC, GC-MS, LC-MS & NMR Spectroscopy.

Outcomes of the Program

- Plant phytochemical screening confirms the presence of phyto-constituents and their importance.
- Students can comprehend the role of plant chemicals in plant metabolism.
- The students can comprehend the importance of various plant extracts in isolation from chemical compounds.
- After studying the course, students can test the activity of Medicinal plants against tested Microbial strains.
- Students can differentiate between primary and secondary metabolites of plant origin.

Certificate Course in Phytochemistry

Unit I

Chapter 1: Introduction to phytochemistry, Definition, Importance and scope of Phytochemistry, Phytochemistry in relation to taxonomy

Chapter 2: Secondary Metabolism

Pollination, Herbivory, Pathogens, Allelopathy, and Factors that influence the content of secondary metabolites in plants

Unit II

Chapter 3: Primary Metabolites

General Introduction, detailed study concerning chemistry, sources, preparation, evaluation, preservation, storage, therapeutic use and commercial utility as Pharmaceutical Aids and/or Medicines for the following Primary metabolites:

Chapter 4: Carbohydrates: Acacia, Agar, Tragacanth, Honey, Proteins and Enzymes: Gelatin, casein, proteolytic enzymes (Papain, bromelain, serratiopeptidase, urokinase, streptokinase, pepsin), Lipids(Waxes, fats, fixed oils): Castor oil, Chaulmoogra oil, Wool Fat, Bees Wax

Unit III

Secondary metabolites

Chapter 5: Alkaloids, Phenols, Flavanoids, Anthraquinones, Anthocyanins, Terpenes, Steroids, Saponins Glycosides definition, classification, distribution in nature and Therapeutic value;

Chapter 6: Coumarins (definition, natural sources, classification, furanocoumarins and pyranocoumarins, Volatile Oils (definition, classifications, natural sources, medicinal and non-medicinal uses); Sesquiterpenes (definition, biogenesis, natural sources, classification, pharmacological and toxicological effects)

Unit IV

Chapter 7: Plant Investigation Methods

Extraction Methods, Isolation of a chemical constituent, Glass column and thin layer chromatography

Chapter 8: Biotechnological applications of natural products

The role of plants in drug discovery, Introduction to drug development applications in agriculture, and Applications in the food industry

PROGRAM REPORT

Program name: **Analytical Chemistry**

Duration of Course: **6 Months**

Venue: **Chemistry Department**

Organized by: **Department of Chemistry.**

Number of participants: **10**

Objective of the program:

Analytical chemistry is a branch of chemistry that deals with the chemical composition of a sample as well as its qualitative and quantitative measurement. This discipline is concerned with general knowledge related to the use of analytical instruments and analysis of experimental data. It aims to fill the industry-academic gap in the students. It also helps the students learn and be prepared for industry related work.

Topics Covered:

- Introduction to Analytical Chemistry.
- Equipment used for chemical analysis.
- Different techniques.
- Preparation and analysis of the sample.

Outcome of the Program

1.Vector-Based Design (Illustrator):Students will demonstrate the ability to create and manipulate scalable vector graphics by working with shapes, paths, typography, and layers to produce professional-quality illustrations and design elements suitable for a range of digital and print applications.

2.Mastering Raster Image Editing (Photoshop):Learners will master the use of Adobe Photoshop for raster image editing, including skills in photo retouching, color correction, blending, and the application of layers, filters, and effects to enhance and produce high-quality visual content.

3.Proficiency in Image Editing for Media: Students will gain proficiency in editing images for both print and digital media by adjusting image properties like brightness, contrast, and resolution, and applying transformations and effects to optimize visuals for different formats and platforms.

4.Digital Drawing Techniques:Learners will develop digital drawing skills, using brush tools, layers, and graphics tablets, to create detailed sketches and illustrations, enhancing their ability to produce both artistic and technical drawings in a digital environment.

5.Fundamentals of Graphic Animation:Students will be able to apply motion graphics and animation techniques, such as keyframing, tweening, and transitions, to create dynamic and engaging animations for use in web and multimedia projects.
