Congress Theme : Geospatial Technologies for Sustainable Energy Resources & SDG's: Policy Frame Works and Global Initiatives

The conference theme "Geospatial Technologies for Sustainable Energy and SDGs: Policy Frameworks and Global Actions" (highlights the critical role that geospatial technologies play in promoting sustainable energy practices and supports the United Nations' Sustainable Development Goals (SDGs). Geospatial technologies, such as Geographic Information Systems (GIS), Remote Sensing, and Global Positioning Systems (GPS), offer powerful tools for collecting, analyzing, and visualizing spatial data related to energy resources, consumption patterns, and environmental impacts.

By focusing on policy frameworks and global actions, the conference aims to explore how geospatial technologies can be helpful in decision-making processes and support the implementation of sustainable energy policies. This includes identifying opportunities for integrating geospatial data for policy development, monitoring the progress of energy-related SDGs, and enhancing cross-sectoral collaboration to achieve common sustainability goals.

The conference provides a platform for experts, policymakers, and practitioners to share knowledge, experiences, and best practices in leveraging geospatial technologies for sustainable energy and other SDG's implementation. Through interactive discussions, workshops, and presentations, participants will explore innovative approaches, case studies, and technological advancements that can drive positive change and contribute to a more sustainable and inclusive future).
